Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant requested reconsideration regarding the objection to the new matter "for continuous rotation through 360 degrees", and "for imparting continuous 360 degrees rotation", the examiner maintains that there is no support in the specification to teach continuous 360 degrees of rotation. Applicant relies on the disclosure of the treatment as being "spinning, rolling and tumbling the body"; and "tumbling or somersault type of head rotation" to infer continuous 360 degrees of rotation. While it is true that these motions of "spinning, rolling, tumbling or somersault" involve a certain degree of rotation, it does not necessary require that the rotation to be continuously 360 degrees. The platform can be rotated 90 degrees forwardly and backwardly to produce a spinning, rolling or tumbling action. Similarly, number of rotations may refer to rotation of a certain degree and not necessary require the rotation to be 360 degrees.

Applicant also argued that Heisler '802 does not teach or suggests imparting continuous 360 degrees of rotation, the examiner maintains that it reasonably appears that Heisler's disclosure of a rotatable platform (columns 5-6 and figs. 1 and 8) would have fairly suggested to one of ordinary skill in the art, a platform being capable of rotating through 360 degrees.
